NON-FINAL OFFICE ACTION

1. Applicant's Request for Continued Examination (RCE), dated 8/31/05, has been entered and carefully considered. Claims 1-7, 14, 21-34, 43, 51-52 remain withdrawn. New claims 89-97 are examined as being drawn to the previously elected invention, a coupling apparatus with a tieing element. The previously stated rejections are rendered moot, since the rejected claims have all been canceled. The references cited in those rejections are not seen to apply to the invention as presently claimed. Therefore, new claims 89-97 are rejected herein.

Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claim 97 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The structure intended by claim 97 is unclear. The examiner is unable to ascertain where said slits are located, how many openings are present, and what is meant by "angular disposed relative to said first slit." The claim is not examined because the intended structure is not at all intelligible.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 1771

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 89-97 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent 5676250 to Walters.
- 6. The Walters reference teaches, and shows in Figures 5 and 6, a substantially planar semi-rigid backer 16 having openings through which the tieing element 40 is inserted. The ornamental item, which is the light string 12, is secured by the tieing element. The opposite side of the backing element 16 is provided with hook or loop fastener material having a first surface abutting the backing element 16, and a second surface to be removeably engaged to a mating portion of hook or loop fastener. The hook or loop fastener attached to the light string may be removeably attached to a mating piece of hook and loop fastener 38. The mating piece of hook and loop fastener has a first surface abutting the object to which the light string is to be attached, such as along a roof line for outdoor decoration (see Figure 5) or to a cylinder for storage (see Figure 1), and a second engageable surface that engages the second surface of the first fastener.
- 7. Regarding claim 91 and 92, the examiner takes official notice that a variety of Velcro constructions are well-known in the art, including "plastic" backing materials such as polymer fabrics, and that it would have been obvious to determine and use a thickness to provide adequate support for the hook and loop elements. Absent a showing of unexpected results with the claimed materials and thickness, Applicant does

Application/Control Number: 09/989,007 Page 4

Art Unit: 1771

not appear to have claimed anything beyond what is known in the fields of material and

textile engineering.

8. Regarding claim 94, the ultimately intended ornamental item does not effect the

structure of the fastener itself. Therefore, although the reference teaches attachment of

a light string, as opposed to the items listed in claim 94, the structural limitations are met

and would not be any different if any of the items of claim 94 were used instead of a

light string. Thus it can be seen that the ultimate intended uses of claim 94 do not

provide patentable distinction to the attachment mechanism.

9. Regarding claim 96, it has been held that altering shapes and sizes requires only

routine skill in the art, and does not provide patentable distinction absent a showing that

the modification actually changes the way the item functions. In the present situation,

changing the shapes of the holes through the backer does not change the way the

backer functions, therefore no patentable distinction is provided.

Response to Arguments

10. A response to Applicant's arguments is not necessary since the arguments

pertain to prior rejections which have since been rendered moot in view of the claim

amendments.

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Arden B. Sperty whose telephone number is (571)272-

1543. The examiner can normally be reached on M-Th, 08:00-16:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Terrel Morris can be reached on (571)272-1478. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
